AMENDMENTS TO THE CLAIMS:

Please amend the claims as follows:

Claims 1-52. (Cancelled)

- 53. (Previously Presented) A process for the production of a fermented dairy product comprising the steps of:
 - (i) contacting a food material with a stabiliser to provide a food intermediate: and
 - (ii) fermenting the food intermediate;

wherein the stabiliser comprises a depolymerised pectin and wherein the food material comprises a milk protein.

- 54. (Previously Presented) A process according to claim 53, further comprising, before step (ii), the step of (i)(a) pasteurising the food intermediate.
- 55. (Previously Presented) A process according to claim 53, further comprising, before step (ii), the step of (i)(b) inoculating the food intermediate.
- 56. (Previously Presented) A process according to claim 53 comprising, in the following order, the steps of:
 - (i) contacting a food material with a stabiliser to provide a food intermediate;
 - (i)(a) pasteurising the food intermediate;
 - (i)(b) inoculating the food intermediate; and
 - (ii) fermenting the food intermediate.
- (Previously Presented) A process according to claim 53 further comprising the step of (iii) pasteurising the product of step (ii).

THORSØE ET AL. Appl. No. 10/568,498 Attv. Ref.: 550-730

Amendment April 13, 2009

58. (Previously Presented) A process according to claim 53 further comprising the step of (iv) adding juice and/or acid to the product of step (i)(b) and/or to the product of step (iii) and/or to the product of step (iii).

59. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a viscosity at 25°C in a 5% solution of 15 cP to 400 cP.

60. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a viscosity at 25°C in a 5% solution of 20 cP to 200 cP.

61. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a viscosity at 25°C in a 5% solution of 25 cP to 50 cP.

62. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin is an essentially linear carbohydrate polymer.

63. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a galacturonic acid content of at least 65%.

64. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a degree of esterification of at least 50%.

65. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a degree of esterification of from 50 to 85%.

66. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a degree of esterification of from 65 to 75%.

67. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a degree of esterification of less than 50%. THORSØE ET AL. Appl. No. 10/568,498 Atty. Ref.: 550-730 Amendment

April 13, 2009

68. (Previously Presented) A process according to claim 53 wherein the depolymerised pectin has a degree of esterification of from 20 to 50%.

69. (Previously Presented) A process according to claim 53 wherein the food material further comprises a protein of vegetable and/or microbial origin.

 (Previously Presented) A process according to claim 53 wherein the food material comorises milk.

71. (Previously Presented) A process according to claim 70 wherein the milk has a milk solid non-fat content of 0.1 to 25 wt%.

72. (Previously Presented) A process according to claim 70 wherein the milk is whole fat milk or partially defatted milk.

73. (Previously Presented) A process according to claim 53 wherein the milk protein has been isolated as a protein powder or protein isolate.

74. (Previously Presented) A process according to claim 54 wherein the pasteurising step (i)(a) takes place at a temperature of at least 80°C.

75. (Previously Presented) A process according to claim 54 wherein the pasteurising step (i)(a) takes place over a period of 5 to 15 minutes.

 (Previously Presented) A process according to claim 55 wherein the inoculation step (i)(b) comprises the addition of a live food-grade micro-organism.

 (Previously Presented) A process according to claim 76 wherein the live food-grade micro-organism is a probiotic bacterium. THORSØE ET AL. Appl. No. 10/568,498 Atty. Ref.: 550-730 Amendment

April 13, 2009

78. (Previously Presented) A process according to claim 76 wherein the live food grade micro-organism is selected from the list consisting of Bifidobacteria.

Streptococcus thermophilus, Lactobacilli and mixtures thereof.

79. (Previously Presented) A process according to claim 76 wherein the live food grade micro-organism is selected from the list consisting of Bifidobacteria.

Streptococcus thermophilus, Lactobacillus casei, Lactobacillus rhamnosus, Lactobacillus bulgaricus and mixtures thereof.

- 80. (Previously Presented) A process according to claim 76 wherein the live food grade micro-organism comprises *Streptococcus thermophilus* and *Lactobacillus bulgaricus*.
- 81. (Previously Presented) A process according to claim 53 wherein the fermentation step (ii) takes place at a temperature of from 30 to 50°C.
- 82. (Previously Presented) A process according to claim 53 wherein the fermentation step (ii) takes place over a period of 2 to 48 hours.
- 83. (Previously Presented) A process according to claim 57 wherein the pasteurising step (iii) takes place at a temperature of at least 80°C.
- 84. (Previously Presented) A process according to claim 57 wherein the pasteurising step (iii) takes place over a period of 5 to 30 seconds.
- 85. (Previously Presented) A process according to claim 53 wherein the fermented dairy product is a beverage.
- 86. (Previously Presented) A process according to claim 53 wherein the fermented dairy product is a fermented milk drink.

THORSØE ET AL. Appl. No. 10/568,498 Attv. Ref.: 550-730

Amendment April 13, 2009

87. (Previously Presented) A process according to claim 53 wherein the

fermented dairy product is a yoghurt drink.

88. (Previously Presented) A process according to claim 53 wherein the

fermented dairy product is a drinking yoghurt drink.

89. (Previously Presented) A process according to claim 53 wherein the

fermented dairy product is a stirred yoghurt.

90. (Previously Presented) A process according to claim 53 wherein the

fermented dairy product contains a live food-grade micro-organism in an amount of from

0.01 to 0.03 wt%.

91. (Previously Presented) A process according to claim 53 wherein the

fermented dairy product contains the stabiliser in an amount of 0.3 to 3.0 wt%.

92. (Previously Presented) A process according to claim 53 wherein the

fermented dairy product has a pH of less than 4.6.

Claims 93-95. (Cancelled)

96. (Previously Presented) A process according to claim 53 wherein the

depolymerised pectin is amidated.

97. (Previously Presented) A process according to claim 53 wherein the

stabiliser comprises a blend of two or more depolymerised pectins.

98. (Previously Presented) A process according to claim 53 wherein the

stabiliser comprises a blend of a HE depolymerised pectin and a LE depolymerised $\,$

pectin.

THORSØE ET AL. Appl. No. 10/568,498 Attv. Ref.: 550-730

Amendment April 13, 2009

99. (Previously Presented) A process according to claim 53 wherein the

stabiliser comprises a blend of a LE amidated depolymerised pectin and a HE

depolymerised pectin.

100. (Previously Presented) A process according to claim 53 wherein the

stabiliser further comprises a high molecular weight pectin.

101. (Previously Presented) A process according to claim 53 wherein the

stabiliser comprises a HE depolymerised pectin and a high molecular weight pectin.

102. (Previously Presented) A fermented dairy product obtained or obtainable by

the process of claim 53.

103. (Currently Amended) A process for improving the texture and/or viscosity of

a fermented dairy product, comprising including a stabiliser in said fermented dairy

product, wherein the stabiliser comprises a depolymerised pectin, and wherein said

stabiliser is applied directly to the dairy product prior to fermentation.

104. (Previously Presented) The process according to claim 103 wherein the

stabiliser further comprises a high molecular weight, high ester pectin.

Claims 105-111. (Canceled)
